VOLUNTARY ANNOUNCEMENT

CHINASOFT LAUNCHES MULTIPLE HarmonyOS PROJECTS ACCELERATING FINANCIAL BUSINESS INNOVATION

Chinasoft International Limited (referred to as “Chinasoft” or the “Company”) is releasing this announcement as a voluntary disclosure to inform the public of the latest information regarding the Company.

The Company is pleased to announce that the HarmonyOS applications developed for multiple financial clients have recently completed internal testing and successfully launched on the Huawei App Market. Since the beginning of this year, Chinasoft has successfully implemented HarmonyOS application projects for several large state-owned banks, joint-stock banks, and securities and insurance companies. This fully demonstrates the Company’s comprehensive participation capabilities as a deep cooperation partner of Huawei in HarmonyOS system and application development, as well as its extensive business experience in the financial industry.

HarmonyOS System Construction Project: Payment Institution

As a national-level application with hundreds of millions of users, this application benefits from Chinasoft’s extensive experience and capabilities in HarmonyOS development. The Company provided comprehensive technical consulting, planning and design, technical architecture construction, and business validation services for the client. On this foundation, the Company carried out a complete native reconstruction of the system on HarmonyOS, fully leveraging the platform’s advantages to achieve massive transaction processing and support for rich and flexible marketing activities.

HarmonyOS System Construction Project: Large State-Owned Bank

This project aims to further enhance the customer experience of credit cards, innovate business processes, and improve security. Chinasoft provided development services for general foundational business functions and customized components based on the architecture design of the service layer, framework layer, and application layer. Through diversified business components, the HarmonyOS application was quickly constructed, realizing business process management, rule management, parameter configuration, user authentication, and a series of business scenarios and security management functions.

Self-developed HarmonyOS Development Platform, Supporting Financial Business Innovation

With 30 years of deep experience and accumulation in the financial industry, combined with technological advancements made during the development of HarmonyOS, Chinasoft independently developed the financial HarmonyOS native application technology development platform (TOP HAPX). This platform integrates four key libraries – App framework, business components, security protection, and view construction – providing a solid foundation for developing financial HarmonyOS applications. At the application layer, the platform offers new capabilities for application coordination and openness, enabling cross-terminal application flows and showcasing exceptional scalability. The display layer supports customized controls for specific business scenarios, allowing for component packaging and rapid deployment, helping financial clients build HarmonyOS native applications. The platform provides a rich component library, including waterfall flow, news, maps, carousel, function containers, and security encryption components, meeting the needs for module construction, display operations, and business function iterations for financial Apps. At the same time, the platform includes backend service simulators, log analysis tools, testing tools, and script templates, offering convenient testing and operational support for systems.

As an important contributor to the HarmonyOS ecosystem, Chinasoft has rich experience in HarmonyOS application development across key sectors in various industries. For financial institutions, it leverages its technical advantages such as “develop once, deploy across multiple terminals” and “innovative AI interaction” to provide end-to-end HarmonyOS native application development services, covering HarmonyOS architecture consulting, business component SDKs, and migration testing services. The Company’s goal is to help financial clients quickly implement HarmonyOS application transformation, seizing new opportunities in traffic, business prospects, and future innovations brought by technological advancements.

By order of the Board
Chinasoft International Limited
